

Mahatma Education Society's

Pillai HOC College of Engineering and Technology,
Rasayani

1.3.2 Percentage of students undertaking project work/field work/ internships (Data for the latest Completed academic year)

Certificates of Internships and field work reports are attached in this Document.

1.3.3 Number of students undertaking project work/field work/ internships

Sr. No.	Programme name	List of students undertaking project work/field work/internship
1	U.G. Program in Information Technology	Siddhi Sanjay Mhatre
2	U.G. Program in Information Technology	Shravani Jadhav
3	U.G. Program in Information Technology	Shravani Shankar Kadam
4	U.G. Program in Information Technology	Sejal Sudhir Lahane
5	U.G. Program in Information Technology	Sanika Janardan Awad
6	U.G. Program in Information Technology	Sandesh Dilip Kurhade
7	U.G. Program in Information Technology	Saloni Santosh Mhatre
8	U.G. Program in Information Technology	Saee Santosh Patil
9	U.G. Program in Information Technology	Riddhi Suresh Patil
10	U.G. Program in Information Technology	Rahul Kumar Reddy
11	U.G. Program in Information Technology	Preity Jagdesh Patil
12	U.G. Program in Information Technology	Pratham Hirdaynath Kalan
13	U.G. Program in Information Technology	Purva Atul Patil
14	U.G. Program in Information Technology	Maithilee Harichandra Vishe
15	U.G. Program in Information Technology	Khushnuma Rafik Mujavar
16	U.G. Program in Information Technology	Kataki Limaye
17	U.G. Program in Information Technology	Janhavi Ravindra Mhatre
18	U.G. Program in Information Technology	Dhiraj Gajanand Gharat
19	U.G. Program in Information Technology	Deven Gupta
20	U.G. Program in Information Technology	Anamika Gajanand Zagade
21	U.G. Program in Information Technology	Amisha Anant Mhatre
22	U.G. Program in Information Technology	Abhijeet Dipak Dekhane
23	U.G. Program in Information Technology	Misal Harshal Dilip
24	U.G. Program in Information Technology	More Swapnil Somnath

JN/TC/A/2022

Date: 13.12.2022

To,
Pillai HOC College of Engg. & Tech.
HOC Colony, Rasayani..

Sub: Grant of Permission for Internship at JNPA.

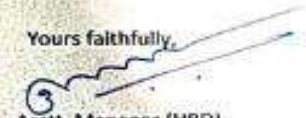

Sir,

Please refer to your email 30.11.2022 on aforesaid subject. Ms. Riya Chandrakant Mhatre (EXTC) whose name has been mentioned in your letter has been permitted to undergo the internship program at JNPA for the period of **01 month** from 13.12.2022 to 12.01.2023 subject to the following conditions.

- 1 The student will be treated as unpaid internee. No lodging, boarding and transport facilities will be provided to the internee.
- 2 An undertaking will be obtained from the internee for maintaining discipline during the training period.
- 3 JNPA will not bear any liability during the internship period due to any accident or personnel injury.
- 4 JNPA will not be liable for any payment or extending any facilities to the internee.
- 5 The project work completed by the above internee shall be used only for academic purpose and should not be made public. A copy of the project work prepared by the internees must be submitted to JNPA and thereafter completion certificate will be issued.
- 6 In case the internee needs training in operational area or is required to visit Dock/Port area of the Port, then She shall arrange Personal Protective Equipment (PPEs) such as Helmet, Safety Shoes, etc. of his own. The internee will not be permitted to enter the Port area without the PPEs.
- 7 Student will be allowed for internship in the Port area as per the faculty.
- 8 Port operational area visit would be accompanied by JNPA official only.
- 9 The concerned student may please be informed to report to the undersigned for further instructions.

Thanking you,

Yours faithfully,

Asstt. Manager (HRD)

Copy to : Manager (MS) – For Information & necessary action please.

"TO WHOMSOEVER IT MAY CONCERN"

This is to certify that Ms Utkarsha Tambe student from Pillai HOC College of Engineering & Technology was with us for Internship training from 07.12.2022 to 06.01.2023.

She has successfully completed her Internship under the guidance of Mr.Sanjay Petkar-DGM (IT).

During the period of her training with RCF, she took keen interest in learning various aspects of IT & her performance was excellent.

We wish her a very successful career.

IBM SkillsBuild

Internship Offer Letter

Dear Mr./Ms. Sameer Rabindra Panda

Student ID: STU6396ee2b339e81670835755 Internship ID: INTERNSHIP_168198413964410a8b547b1 Date: 09/06/2023
We would like to congratulate you on being selected for an Internship under IBM SkillsBuild Program on **Artificial Intelligence (AI)**. As an intern, you will learn and demonstrate skills that will enhance your employability and your confidence in the subject area.

IBM SkillsBuild is an e-learning platform that helps job seekers gain the foundational skills necessary to prepare for entry-level positions while earning credentials and receiving guidance for industry experts at no cost. The IBM SkillsBuild Internship is brought to you by the Edunet Foundation. We are pleased to offer you an Internship for a period of 6 weeks beginning from **12-06-2023 to 24-07-2023**

During this internship, you will work in a team and be assigned a mentor who will guide you to identify a solution to the problem and develop it into a project. The internship will be providing the following benefits:

- Access to IBM SkillsBuild e-Learning Platform with over 80,000 curated courses on technical and professional skills
- Opportunity to accelerate your learning in project-based, collaborative environments
- Learners can experience masterclasses led by Subject Matter Experts
- Showcase your skills by solving real-world challenges
- Certification from IBM and Edunet to enhance your value to future employers

Timeline and project:

The structure of the IBM SkillsBuild internship camp is as follows

Week	Deliverables	Submission by students
Week 1	Orientation of Internship and SkillsBuild Platform	1. Registration on SkillsBuild using Gmail Id 2. Exploring SkillsBuild and Learning Plan for respective domain
Week 2	Technical Session, Project Topic	1. Commence Project Related tasks 2. Self paced Learning
Week 3	Technical Session, Common Q&A form	1. Project related tasks 2. Self-paced learning 3. Share queries via Q&A form
Week 4	Technical Session, Query Resolution	1. Submission of project and IBM SkillsBuild queries in Q&A form
Week 5	Project Completion and Submission Q&A	1. Self Paced learning 2. Project work with Query Resolution
Week 6		Project Submission (PPT)

Criteria for certification:

- Participation in weekly sessions with mentors is mandatory
- Completion of tasks/milestones on a weekly basis
- Completion of learning plan on IBM SkillsBuild
- Submission of a project presentation required

Stipend:

There will be NO stipend for this internship. If you agree to the above terms of the offer, please indicate acceptance of the offer letter and below undertaking to the undersigned.

Sincerely,
Thirukumar Nagarajan
VP HR- India and South Asia, IBM

Undertaking Agreement

I, **Sameer Rabindra Panda**, from **Pillai Hoc College Of Engineering And Technology** who is undergoing an internship at Edunet Foundation under IBM SkillsBuild program, do hereby undertake on **09/06/2023**, the following:

1. I will be present at the weekly sessions conducted virtually, as organized by the mentor and team, to undertake the courses assigned to me for the duration of the internship. I will communicate to the mentor and team should there be any reason or inability to be present.
2. I will communicate regularly with the said mentor on the courses' progress.
3. I declare that I will ensure the timely submission of the project and will deliver a presentation within the stipulated time to complete the internship and earn a certificate.
4. I will adhere to and maintain the decorum of weekly sessions conducted virtually and will not be involved in any disciplinary practice during the same and abide by ethical standards followed by Edunet Foundation under SkillsBuild program.
5. I declare that my internship with Edunet Foundation shall be terminated at any stage on the grounds of:
 - Absenteeism from masterclasses and mentor-led sessions
 - Not in touch with mentor or team
 - Mentor identifies that there is no contribution to the team
 - Not reachable by Edunet Foundation
6. I further declare that my internship shall be terminated forthwith at any stage, misbehaviour, inciting hatred, indiscipline, habitual insubordination etc. or on grounds of misconduct etc. as came to the notice of Edunet Foundation.

Sincerely,

SUB: INTERNSHIP COMPLETION LETTER

This to certify that **Mr. Deep S Mahadik**, of Pillai HOC College of Engineering & Technology Rasayani has successfully completed his internship with us, from **09thDec 2022 to 23rdDec 2022**.

During his internship, he was exposed to detailed **Manufacturing and Testing process of Distribution Transformer**.

We found him extremely inquisitive and hard working. He was very much interested to learn the functions of our core division and also willing to put his best efforts and get in to the depth of the subject to understand it better.

His association with us was very fruitful and we wish him very best in his future endeavors.

For, Shree Transformers.

ACKNOWLEDGEMENT

First I would like to thank Mr Manoj B. Karale [Head Business HR] of TATA POWER COMPANY LTD. KHOPOLI for giving me the opportunity to do an internship within the organization.

I am deeply indebted to sir, Mr. Fulendra Dhurandhar(Head of Khopoli) and Mr Abhijit Patil(Head of operation) for giving me such an opportunity to learn and gain practical knowledge.

I also would like to thank all the people that worked along with me at TATA POWER COMPANY LTD. KHOPOLI with their patience and openness created an enjoyable working environment.

It is indeed with a great sense of pleasure and immense sense of gratitude that I acknowledge the help of these individuals.

I am highly indebted to Principal Dr Prof. J.W.Bakal for the facilities provided to accomplish this internship.

I would like to thank my Head of the Department Prof. Pranita Chavan for her constructive criticism throughout my internship.

I would like to thank Mrs Supriya Shigwan Mam, College internship coordinator [Department of EE] for their support and advice to get and complete the internship in the above-said organization.

I am extremely grateful to my department staff members and friends who helped me in the successful completion of this internship.

HYDRO POWER PLANT LAYOUT

Basic term related to hydro power plant:-

1. Reservoir: a receptacle or chamber for holding a liquid or fluid.
2. Dam: a civil construction to control flow of water.
3. Penstock: A connecting pipe between the dam and nozzle.
4. Valve: To start/stop flow of water
5. Surge Tank: A surge tank is a water storage device used as a pressure neutralizer in a hydropower water conveyance system to resist excess pressure rise and pressure drop conditions.
6. Nozzle: Nozzles are frequently used to control the rate of flow, speed, direction, mass, shape, and/or the pressure of the stream that emerges from them.
7. Turbines: These convert kinetic energy into mechanical energy.
8. Generator: A machine that converts mechanical energy into electrical energy.

Dam: There are total 4 Dam

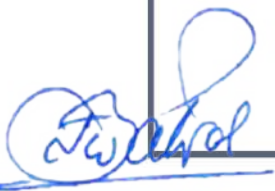

- **Kundli Dam:** Its total storage capacity is 6.34 MCM also divided into two phases (phase I, phase II)

PRINCIPAL

Mahatma Education Society's
Pillai HOC College of
Engineering and Technology.

Pillai's HOC Educational Campus
Rassyan, Tal. Khelapur
Dist. Raigad, Pin-410 207

- **Shirawta Dam:** -It is the largest Dam with a capacity of 197.28 MCM
- **Walwhan Dam:** - It is connected to Shirawta Dam and its capacity is 72.12 MCM
- **Lonavala Dam:-** It is the smallest Dam which is mostly used in the rainy season with a capacity of 11.72 MCM Water for power generation is supplied by three lakes, Shirawta, Walwhan & Lonavla. A fourth Lake, Kundli facilitates augmenting run of for Shirawta Lake wherein a maximum of 75.6 MCM can be transferred to Shirawta Lake during the monsoon season. An unlined tunnel having a capacity of 700 Cusecs connects Shirawta & Walwhan to each other. The water for power generation is controlled at Walwhan Lake. Lonavla Lake is the smallest of the three lakes. The water for power generation during monsoon is supplied by this lake. Main duct line runs from Walwhan to Forebay and is 696 1.3 M long. Lonavla lake duct line is 486.16 M long and connects Lonavla sluices to the main duct line at a distance of 4255.3 M from Walwhan. Water from duct line is led into Forebay before it enters the Penstocks. The Old penstocks as well as Hydro Penstock is subsequently replaced by an underground tunnel from Forebay to PowerHouse for feeding the new 24 x 3 MW Units.

Types of Turbines

A) **Impulse turbine:** An impulse turbine generally uses the velocity of the water to move the runner and discharges at atmospheric pressure. A water stream hits each bucket on the runner. With no suction on the downside the turbine, the water flows out the bottom of the turbine housing after hitting the runner. An impulse turbine is generally suitable for high-head, low-flow applications. The two main types of impulse turbines are Pelton and cross-flow turbines.

- ❖ Pelton turbine
- ❖ Cross-flow turbine

B) **Reaction turbine:** A reaction turbine generates power from the combined forces of pressure and moving water. A runner is placed directly in the water stream, allowing water to flow over the blades rather than striking each individually. Reaction turbines are generally used for sites with lower head and higher flows and are the most common type currently used in the United States.

- ❖ Francis
- ❖ Kaplan
- ❖ Propeller

Here at Tata Power, Khopoli **Pelton turbines** are used.

Pelton Turbine: In a Pelton turbine, the blades are spoon-shaped and the water is allowed to strike via a nozzle to the blade of a turbine. The blade of the Pelton turbine is also known as a bucket. Sometimes, the Pelton turbine is also known as the Pelton wheel.

In some cases, instead of one nozzle, a set of nozzles are used to split into a number of streams. These streams flow along the inner curve of the blade and pass in the opposite direction. This creates an impulse on the blade of the turbine and generates high torque by which the turbine starts rotating. Generally, Pelton turbines are used in a hydroelectric power plant where the high head and low flow should consider. The plants with available water head more than 985 feet and have a water reservoir using the Pelton wheel.

GENERATOR

Powerhouse has 3 Generators with a generating capacity of 72 MW (3 X 24 MW / 28.25 MVA). The generating voltage is at 11 KV. All the generators are of Siemens make.

The stator winding which is connected in star has its neutral grounded through Neutral Grounding Transformers.

The rotor consists of 8 poles (salient type) mounted on through periphery of the shaft. Static excitation system is employed here.

The Generator terminal voltage is stepped down by a 250 KVA, 11KV / 160 V Excitation Transformer.

This is then fed to a DC converter through ACB, and then to the rotor through slip rings. Initial excitation (field flashing) is achieved by 230 V, 645 AH batteries. Generator windings are air-cooled & the air is water-cooled.

For measurement of temperature of the windings, resistance temperature detectors are installed in the stator core & windings.

Working Principle of a Transformer

The transformer works on the principle of Faraday's law of electromagnetic induction and mutual induction.

There are usually two coils primary coil and secondary coil on the transformer core. The core laminations are joined in the form of strips. The two coils have high mutual inductance. When an alternating current pass through the primary coil it creates a varying magnetic flux. As per faraday's law of electromagnetic induction, this change in magnetic flux induces an emf (electromotive force) in the secondary coil which is linked to the core having a primary coil. This is mutual induction.

Parts of Transformer:

- Core
- Winding
- Insulation
- Tank
- Terminal and bushings
- Transformer oil
- Oil Conservators
- Breather
- Radiators and fans
- Explosion vent
- Tap changers
- Buchholz relay

Isolator

The isolators in substations are mechanical switches which are deployed for the isolation of circuits when there is an interruption of current. These are also known by the name disconnected switches operating under no-load conditions and are not fortified with arc-quenching devices. These switches have no specific current breaking value neither they have current making value. These are mechanically operated switches.

Insulator

The insulators are the materials which do not permit the flow of electrons through them. Insulators are resisting electric properties. There are numerous types of insulators such as shackle, strain type, suspension type, stray type etc. Insulators are used in substations for avoiding contact with humans or short circuits.

Types of Insulators

There are five different types of insulators which are categorized by their capacity in producing electricity.

- a) Pin insulators
- b) Suspension insulators
- c) Strain Insulators
- d) Stay Insulators
- e) Shackle Insulators

Gang Operated Device

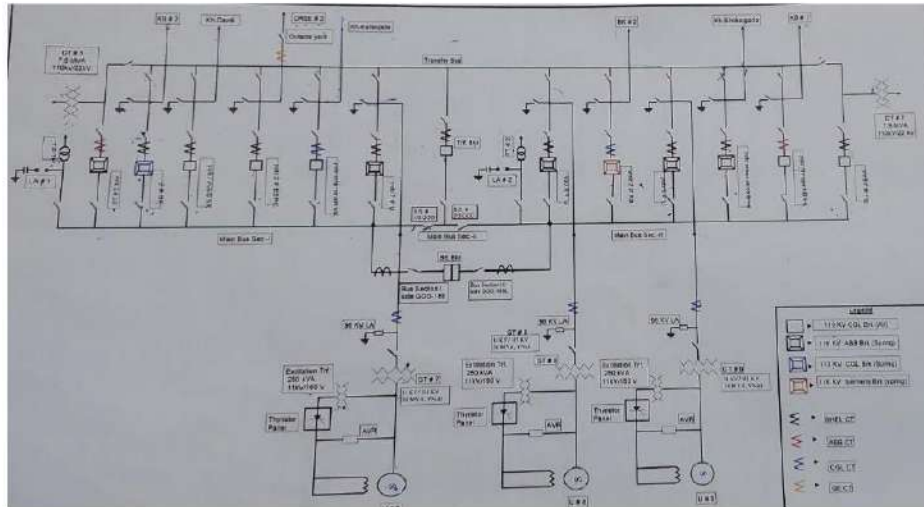

It's Gang Operated Device, It is the most commonly used switch in small to medium substations, Pole mounted Substations is a gang-operated, air-break disconnect switch.

The "Gang" refers to the three phases being electrically or mechanically tied together so that the 3 phases open at the same time. The "Air Break" refers to a visible break in the air that allows crews to see that the switch is truly open.

110 KV MAIN BUS

It is divided into three sections through sectionalizing GOD's. Normally all three bus sections are operated continuously. Two 110 KV PTs are also located in the outdoor switchyard in Bus Section - I and Bus Section - III respectively along with lighting arrestors. 110 KV Main Bus is divided in 2 Zone. Normally all equipment's of Bus Section-1 is connected in Zone -1 & all equipment's of Bus Section -3 is connected in Zone -2. Bus Section -2 (Transfer Breaker) is connected either in Zone -1 or 2 through its Main Bus side GODS. If Bus Section # & 2 side GOD is Closed & Bus Section # 2 & 3 side GOD is Open condition, then (Bus Section -2) Transfer Breaker is connected in Zone - 1. If Bus Section # 1 & 2 side GOD is Open & Bus Section # 2 & 3 side GOD is Closed condition, then (Bus Section-2) Transfer Breaker is connected in Zone-2.

110 KV TRANSFER BUS

It is used to transfer 110 KV lines, distribution Transformers (DT-5 & DT-7) or Units when their CB is required to be out for maintenance. Only one equipment can be taken at a time on transfer bus. The Transfer Bus is always kept charged through the Transfer Breaker to ensure service worthiness.

NUMERICAL RELAY

It is based on digital devices e.g. microprocessors, microcontrollers, digital signal processors, etc.

The numerical relay is a type of relay that acquires the value of the measuring quantities in digital form, analyzes and processes it, checks the system for fault, and makes trip decisions.

The numerical relay monitors the analog signals (current and voltage) through the current transformer and voltage transformer. These signals are sampled and conditioned at particular instants of time and then converted into a numeric form for displaying and recording.

Then the DAS (data acquisition system) acquires the sample of ac quantities in digital form and processes the data numerically using an algorithm to calculate fault and make a trip decision.

If there is a fault in the protective zone, a trip signal is issued to the circuit breaker.

Working

At the power system, current and voltage levels are so high. Therefore, the current and voltage levels are reduced by the current and voltage transformer.

The outputs of CT and VT are served to the signal conditioner. Signal conditioner is a crucial part of DAS.

In the signal conditioner, the auxiliary transformer isolates the relay from the power system and reduces the levels of signals to make them suitable for use in the relays.

The I/V converter converts current signals into proportional voltage signals to make them accessible to the A/D converter. Because the A/D converter only accepts only voltage signals.

The low pass filter or anti-aliasing filter prevents the aliasing of the signal.

The outputs of the signal conditioner are applied to the analog interface.

The analog interface samples the reduced level signals and converts their analog levels to equivalent numbers that are stored in memory. Then a relaying algorithm processes the discrete numbers.

The quantities are compared with the predetermined setting to decide whether the power system is experiencing faults or not.

If there is any fault in the power system, the relay sends a trip signal to the circuit breakers for isolating the faulted zone for the power system.

Handwritten signature in blue ink.

SUB: INTERNSHIP COMPLETION LETTER

This to certify that **Mr. Adesh T Thakur**, of Pillai HOC College of Engineering & Technology Rasayanihas successfully completed his internship with us, from **09thDec 2022 to 23rdDec 2022**.

During his internship, he was exposed to detailed **Manufacturing and Testing process of Distribution Transformer**.

We found him extremely inquisitive and hard working. He was very much interested to learn the functions of our core division and also willing to put his best efforts and get in to the depth of the subject to understand it better.

His association with us was very fruitful and we wish him very best in his future endeavors.

For, Shree Transformers.

ABSTRACT

Hydroelectric power generation is one of many ways in which electricity can be generated. In 2009, the three most heavily used sources for generating electricity were coal, natural gas and oil. These sources not only release emissions that are harmful to the environment, they are resources that are quickly running out. Therefore, different ways of generating power will need to be explored. Hydroelectric power works to harvest the inherent energy of moving water by directing the water through turbine converting the energy of the moving water into mechanical energy. The mechanical energy is then converted into electricity in the generator. In order to choose the appropriate generator for a specific application, the flow rate and pressure head of water source must be known. Hydropower on a small-scale is one of the most cost-effective energy technologies to be considered for rural electrification in less developed countries. It is also the main prospect for future hydro developments in Europe, where the largescale opportunities have either been exploited already, or would now be considered environmentally unacceptable. Small hydro technology is extremely robust and is also one of the most environmentally benign energy technologies available. The development of hydro-electricity in the 20th century was usually associated with the building of large dams. Hundreds of massive barriers of concrete, rock and earth were placed across river valleys worldwide to create huge artificial lakes.

Introduction

Khopoli Hydroelectric Project

Khopoli Hydroelectric Project is an electricity-generating complex in Khopoli, Maharashtra state, India. It generates power using water from the nearby Walwhan, Shirawta, Kundli, and Lonavla Dams. Khopoli lies approximately 70 km from Mumbai. Its construction was completed in 1915.

Specifications

The plant's maximum output capacity is nominally 72 MW, generated by three 24 MW Pelton.

Objective

Regulation of generation for optimum efficiency
Prevention of system shutdown by intelligent islanding and load management

Location

Khopoli

Dist. Raigad, Pin-410 207

Working of Pelton turbine

The working principle is water is coming from the storage reservoir through a penstock to the Inlet of the nozzle which is the inlet of the turbine so the hydraulic energy of the water is mainly converted into kinetic energy.

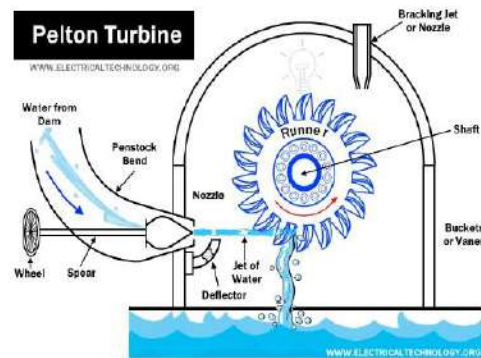

The water releases in the form of a jet from the nozzle and strikes the vanes for a very small time duration.

Since a very high force is exerted on the vanes by the jet of water for a very small time duration so these turbines are known as Impulse turbines.

Bucket changes the direction of run/flow of the water jet and momentum transfer takes place.

All events happen in open air i.e at atmospheric pressure. The nozzle is used to convert the head available with water into a dynamic head and the water comes out from the nozzle in the form of a jet.

As the jet strikes over the runner vane, it will apply a large magnitude force for a small amount of time over the runner called the Pelton force the Pelton force will rotate the runner.

Generator Rotor

There are 2 main types of synchronous generator rotor.

- Salient Pole Rotor
- Cylindrical Rotor

Salient Pole Rotor

- This type of rotor has many no of poles that are manufactured on the wheel like arrangements.
- These poles are constructed from steel and are laminated.
- The windings of the rotor are wound on these poles and at the corners, windings are controlled by the pole shoe.
- The diameter of the salient pole rotor is higher and its axis is short.
- The salient pole rotor has 4 or large no of the pole.

Basis of Difference	Cylindrical Rotor Synchronous Generator	Salient-Pole Synchronous Generator
Description	A synchronous generator that has its rotor which is cylindrical in shape is known as cylindrical rotor synchronous generator.	A synchronous generator whose rotor has poles projected on the rotor surface is called salient pole rotor synchronous generator.
Pole	In a cylindrical rotor alternator, the portion without the slots of the cylindrical rotor acts as poles. Thus, the poles are non-projecting type.	In salient pole alternator, the rotor poles are projecting out from the surface of the rotor.
Rotor diameter	The diameter of the cylindrical rotor alternator is relatively smaller.	The diameter of the salient-pole rotor alternator is larger than that of cylindrical rotor alternator.
Axial length	Cylindrical rotor alternator has large axial length.	The axial length of the salient-pole rotor alternator is small.
Air gap	In cylindrical rotor alternator, the air-gap between stator and rotor is uniform because it has smooth cylindrical periphery.	Salient pole rotor alternator has non-uniform air gap because the poles are projecting out from the surface.

PRINCIPAL

Pillai HOC College of
Engineering and Technology.

Pillai's HOC Educational Campus
Rassyan, Tal. Khelapur
Dist. Raigad, Pin-410 207

Also called	Cylindrical rotor alternator is also called "non-salient rotor alternator" or "non-projected pole type alternator".	Salient pole alternator is also known as "projected pole type rotor alternator".
Rating (For the same size)	The rating of the cylindrical rotor alternator is higher than salient pole alternator.	Salient pole alternator has smaller rating than the cylindrical type alternator.
Mechanical strength	The mechanical strength of the cylindrical rotor alternator is high.	Salient pole alternator has relatively less mechanical strength.
Damper winding	Cylindrical rotor alternator does not have separate damper winding.	Salient pole alternator have separate damper winding.
Suitability	Cylindrical rotor alternator is suitable for high speed applications. Where, the speed ranges from 1500 to 3000 RPM.	Salient pole rotor alternator is most suitable for low speed applications, where the rotor speed ranges from 125 to 500 RPM.
Prime mover	The prime movers used for running the cylindrical rotor alternator are steam turbines used in thermal, gas, and nuclear power plants.	The prime movers used for driving the salient pole alternators are hydro turbines and IC engines

Types of Synchronous Generators:

- A. Rotating Field Type**
- B. Rotating Armature Type**

Rotating Field Type: -

In this type of generator armature winding is placed on the stator and field winding is placed on the rotor. This type of Synchronous generator is widely used as its efficiency is more than other types. DC supply is needed for the field winding. This DC supply is fed through a slip-ring brush arrangement. The DC supply used is 110 V, 200 V, 230 V, and 400 V. When the DC supply is fed to field winding it generates a magnetic field and since the field system is a rotating member, the stationary armature winding cuts this flux thus an emf is induced in the armature winding.

The frequency of the alternating voltage generated in the stator windings is proportional to the number of poles in the rotor field and the speed of the shaft rotation. The armature winding terminals (R, Y, B) are taken out from the stator body. This 3 phase AC voltage is obtained as an output.

Rotating Armature Type: -

In this type, the field system is a stationary member and the armature system is a rotating member. The armature system is supported on the shaft. The DC supply can be directly connected to field winding terminals. The armature is a rotating member. It carries armature winding in slots. When the armature rotates the armature winding cuts the stationary flux produced by field winding, thus e.m.f induced in the armature winding.

TRANSFORMER

A transformer is a static electrical device that transmits AC power from one circuit to another at a constant frequency, but the voltage level may be changed, implying the voltage can be increased or decreased depending on the requirement.

Types of transformer:

PRINCIPAL

Mahatma Education Society's
Pillai HOC College of
Engineering and Technology,
Pillai's HOC Educational Campus
Rassyanil, Tal. Khelapur
Dist. Raigad, Pin-410 207

GENERATOR TRANSFORMER

Generating transformers are usually step up transformers. It is used to connect generator output to grid.

It must be as close to the generator as possible so as to keep the main connections as short as possible. Emulsifier system is used in case of fire.

The transformers are connected on LV through an 11 kV bus duct and on the HV side connected to the outdoor 110 KV individual Breaker bay.

The transformers have to off-load tap changers on the HT side with eight taps available. The transformers are Oil Natural Air Force (ONAF) cooling Each set is connected to a 34 MVA transformer.

SWITCHYARD

A switchyard is a switching station which is the main link between the generating plant and the transmission system. Switchyard plays a major part in the security of the system; it can control the reactive power devices which plays a major role in power quality.

Switchyard consists of many equipment's such as

- Current Transformer
- Voltage Transformer
- Instrumental Transformer
- Lightning Arrester
- Circuit Breaker
- Bus Bar
- Isolator
- Insulator
- Gang-operated disconnecter (GOD)

Instrumental Transformer

Instrumental Transformers are used in AC system for measurement of electrical quantities i.e., Voltage, power, current, power factor, frequency. Instrumental transformers are also used with protective relay, for protective relays for the protection of power system.

Instrumental Transformers are basically used to step down the AC system voltage and current. Therefore, these instrumental transformers are very popular in modern power systems.

Current Transformer

A current transformer (CT) is a type of transformer that is used to reduce or multiply an alternating current (AC). Current Transformers are used extensively for measuring current and monitoring the operation of the power grid. Current transformers reduce high voltage currents to a much lower value and provide a convenient way of safely monitoring the actual electrical current flowing in an AC transmission line. The current Transformer is also called a series transformer as its connected in series.

PRINCIPAL

Mahatma Education Society's
Pillai HOC College of
Engineering and Technology.

Pillai's HOC Educational Campus
Rassyanl, Tal. Khelapur
Dist. Raigad, Pin-410 207

Voltage Transformer

Voltage Transformer is used for stepping down the system voltage to a safe value which can be fed to low ratings meters and relays. These relays and meters are used for the protection and metering, which are designed for low voltage. Voltage Transformer is also called as potential transformer. They are connected in parallel type.

Lightning Arrester

The circuit which is protected from the strokes of lightning with the help of a protection device is known as a lightning arrester. Here the lightning strokes are nothing but surges with high transient voltage, arcs of isolation, spark, and surge currents because of lightning. These devices are used to defend the power systems by forwarding the high voltage surges in the direction of the ground.

These power systems and over headlines can also be protected by using ground wire or earthing from the direct strikes of lightning. These devices can be arranged on the towers, transmission poles and buildings to give a secure lane to the voltage and discharging current.

Circuit Breaker

A circuit breaker is a piece of equipment which can

- i. Make or break a circuit either manually or by remote control under normal conditions.
- ii. Break a circuit automatically under fault conditions.
- iii. Make a circuit either manually or by remote control under fault conditions.

A circuit breaker essentially consists of fixed and moving contacts, called as electrodes. Under normal conditions, these contacts remain closed and will not open automatically until and unless the system becomes faulty. When the fault occurs on any part of the system, the trip coils of the circuit breaker get energised and the moving contacts are pulled apart by some mechanism, thus opening the circuit.

When a short circuit occurs, a heavy current flow through the contacts of the circuit breaker before they are opened by the protective system. At the instant

Dist. Raigad, Pin-410 207

when the contact area decreases rapidly and a large fault current causes an increase in current density and a rise in temperature. This phenomenon is Arc.

So, to reduce the arcing we use different methods to extinction the arc. The different methods are used

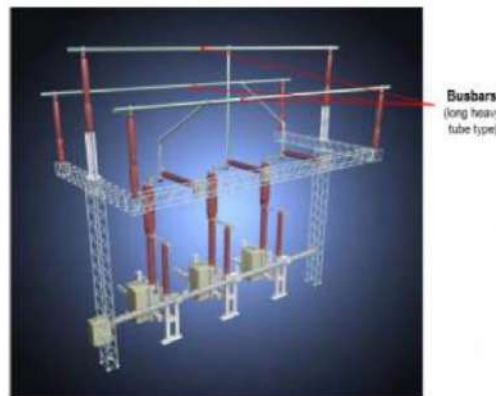

- i. Oil circuit breakers: These employ some insulating oil for arc extinction.
- ii. Air blast circuit breakers: In which a high-pressure air blast is used for extinguishing the arc.
- iii. Sulphur hexafluoride circuit breakers: In which sulphur hexafluoride (SF₆) gas is used for arc extinction.
- iv. Vacuum circuit breaker: In which vacuum is used for arc extinction

Busbar

BUSBAR (or bus, for short) – is a term we use for a main bar or conductor carrying an electric current to which many connections may be made.

Buses are merely convenient means of connecting switches and other equipment into various arrangements. The usual arrangement of connections in most substations permits working on almost any piece of equipment without interruption to incoming or outgoing feeders. In the switchyard or substation, buses are open to the air. Aluminium or copper conductors supported on porcelain insulators, carry the electric energy from point to point.

In this Power plant, Main and transfer bus system is used.

SWITCHGEAR

Switchgear is a piece of equipment that is mainly used to switch, control, and protect electrical components and circuits. Basically, switchgear is a combination of electrical switches, circuit breakers, isolators, relays, and fuses. The arrangement of these devices is used for interrupting current under normal and abnormal operating conditions. All the components of the switchgear are perfectly packed into a properly earthed metal container. Switchgear does not only protect the load from being damaged, but it also maintains the safety of transmission cables and the switchgear itself.

Classification of Switchgear

The classification of switchgear is depending upon the voltage level

On the basis of the voltage level, the switchgear can be broadly classified into three categories, namely low voltage switchgear, medium voltage switchgear, and high voltage switchgear.

- **Low Voltage (LV) Switchgear:**

Low voltage switchgear is used in the power electronic circuits that deal with the voltage level up to 1KV. Some of the most commonly used low voltage devices required to protect the low voltage systems include air circuit breakers, oil circuit breakers, earth leakage circuit breakers, miniature circuit breakers, moulded case circuit breakers, switch fuse units, HRC fuses, etc.

- **Medium Voltage (MV) Switchgear:**

The electrical systems that work up to 36 kV are known as medium voltage systems. The systems working within this particular level of voltage make use of medium voltage switchgear. Medium voltage switchgear typically includes equipment such as bulk oil circuit breakers, minimum oil circuit breakers, etc. The interruption medium used by medium voltage switchgear may be either oil, vacuum, or other special non-toxic, inert, and insulating gases such as SF₆. On the basis of the type of interruption medium used, the medium voltage switchgear can be categorized into air, vacuum, and gas-insulated switchgear.

PRINCIPAL

Mahatma Education Society's
Pillai HOC College of
Engineering and Technology.

Pillai's HOC Educational Campus
Rassyan, Tal. Khelapur
Dist. Raigad, Pin-410 207

- **High Voltage (HV) Switchgear:**

The electrical system working at voltages above 36kV makes use of high-voltage switchgear. The main equipment used in the construction of high-voltage switchgear is the high-voltage circuit breaker. The interruption medium generally opted by the high voltage switchgear is SF₆ gas, vacuum, etc. The devices and systems working at high-level voltages tend to produce high arcing during the switching operation, which is why special care must be taken while designing such a system. The reliability of such devices is required to be extremely high. It must be noted that the switching and tripping operations of the high-voltage switchgear are observed very rarely.

A handwritten signature in blue ink, appearing to read 'S. S. S.', is located at the bottom left of the page.

TO WHOMSOEVER IT MAY CONCERN

This is to certify that **Mr. Pratham Hridaynath Kalan** has done his internship as a Frontend Developer at JSB Market Research, Plot No. 74, NMS Titanium office no. 807, 8th floor, sec 15, CBD Belapur, from 15/12/2022 to 06/01/2023.

He has worked on two projects: -

Project 1: - Mobile app designing.

This project was aimed at mobile app designing in figma. As a part of the project, he has done UI design of a article app with help of figma software.

Project 2: - Photography Website.

This project was aimed at making a photography website. As a part of the project, he has done frontend development.

During his internship he has demonstrated his skills with self-motivation to learn new skills. His performance exceeded our expectations and he was able to complete the project.

We wish him all the best for his upcoming career.

Internship Appointment Letter

Date : 18th January, 2023

Ketaki Limaye,

Mumbai, Maharashtra

Dear Ketaki,

We would like to congratulate you on being selected for the Website Development Intern position with TheDigiAlly, effective 19th January, 2023. All of us at TheDigiAlly are excited that you are joining the team.

As discussed, this is a paid internship during which you will be expected to complete the given tasks within the given deadline. The internship starts from 19th January, 2023 and ends at 19th April, 2023 (excluding National Holidays).

You will be collaborating with the Client Management department of TheDigiAlly.

We hope that your association with the Company will be successful and rewarding. Looking forward to a productive time with you.

Sincerely,

TO WHOM-SO-EVER IT MAY CONCERN

This is to certify that **Miss. Gayatri Ratnakar Kolambe**, a student of Civil Engineering, Pillai HOC College of Engineering & Technology, Rasayani, Tal-Khalapur, has successfully completed internship program from 23 December 2022 to 08 January 2023 at CIDCO, Navi Mumbai.

Based on Institution's letter dtd. 19.12.2022 addressed to Superintending Engineer (HSG-III) CIDCO, she was deputed on the work of "Construction of approx. 22,973 nos. of EWS/LIG type dwelling units (Package-IV) with development of commercial area & onsite infrastructure works at various locations viz. Bamandongri station, Kharkopar Station (West), Kharkopar (East) & Taloja Sector 39, Navi Mumbai" for internship, which she has successfully completed.

During the period of her internship program with us, she was found punctual, hard-working and inquisitive.

We wish her success in her future career.

This is to certify that **Mr. Anurag Budhadas Dhotre**, a student of Civil Engineering, Pillai HOC College of Engineering & Technology, Rasayani, Tal-Khalapur, has successfully completed internship program from 23 December 2022 to 08 January 2023 at CIDCO, Navi Mumbai.

Based on Institution's letter dtd. 19.12.2022 addressed to Superintending Engineer (HSG-III) CIDCO, he was deputed on the work of "Construction of approx. 22,973 nos. of EWS/LIG type dwelling units (Package-IV) with development of commercial area & onsite infrastructure works at various locations viz. Bamandongri station, Kharkopar Station (West), Kharkopar (East) & Taloja Sector 39, Navi Mumbai" for internship, which he has successfully completed.

During the period of his internship program with us, he was found punctual, hard-working and inquisitive.

We wish him success in his future career.

Welcome Letter

**Congratulations,
BHAKTI PRAVIN BHOIR**

10 July 2023

We are delighted to offer you a virtual internship opportunity at Bharat Intern as a "Web Development Intern", starting from "10 July 2023". We extend our warmest congratulations on being selected for this role, and we are thrilled to have you onboard with us!

At Bharat Intern, we believe that an internship is not just a job, but rather an educational opportunity for students to learn and develop new skills. Therefore, this internship will provide you a hands-on learning experience, where you will have the chance to apply your theoretical knowledge to real-world scenarios.

You will be exposed to numerous opportunities to refine and showcase your skills, enabling you to gain a deeper understanding of the industry and its workings.

By accepting this internship offer, you acknowledge your commitment to perform all tasks assigned to you with the utmost diligence and comply with all reasonable directives provided to you by your superiors. We are confident that your time with us will be a rewarding and enriching experience that will provide you with the skills and knowledge you need to excel in your future endeavours.

Best of Luck !

DIGITAL TYCOON TECHNOLOGIES LLP
Tycoon of Digital Solutions

24-07-2023

To,
Sakshi Patil

Subject: Internship Completion Letter

Dear Ms. Sakshi Patil,

I hope this letter finds you well. I am writing to express my sincere appreciation for your dedication and hard work during your one-month internship at Digital Tycoon Technologies LLP. We are pleased to acknowledge the successful completion of your internship, where you contributed significantly to the company's success by handling and adding data to our website.

Throughout your internship period, you displayed a high level of professionalism, enthusiasm, and a strong willingness to learn. Your meticulous approach to handling and adding data to the website demonstrated excellent attention to detail and accuracy, which significantly improved the overall quality of our online platform.

Your ability to work collaboratively with our team members and your proactive nature in taking up new challenges were truly commendable. Your positive attitude and adaptability made you a valuable addition to our organization.

Your contributions have not gone unnoticed, and we believe that the skills and experience you gained during this internship will undoubtedly serve as a strong foundation for your future endeavors in the field of technology and digital management.

On behalf of the entire team at Digital Tycoon Technologies LLP, I extend our heartfelt gratitude to you for your commitment and hard work during your internship. It was a pleasure having you as part of our team, and we wish you all the best for your future endeavors.

If you ever consider pursuing a full-time position or any other collaboration in the future, please do not hesitate to reach out to us. We would be delighted to explore any potential opportunities with you.

Once again, thank you for your valuable contributions, and we wish you every success in your future endeavors.

Sincerely,
**DIGITAL TYCOON
TECHNOLOGIES LLP.**

Mini-Project Certificate

This is to certify that the Mini-project-I Report entitled "Desing and Manufacturing of hydraulic system on Mini Dumper " is successfully submitted by following students:

GROUP NO: M-14

Mohit Deshmukh	03
Dhiraj Kharkar	11
Nitesh Mundhe	19
Siddhesh Mundhe	19

As per the syllabus and in partial fulfilment for the completion Bachelor's degree in Mechanical Engineering from University of Mumbai, it is also to certify that this is the original work of the students done during the academic year 2022-2023.

Department of Mechanical Engineering, Pillai HOC College of Engineering and Technology (PHCET), Rasayani arranged an industrial visit to :

- **Shri Chhatrapati Sahakari Sakhar Karkhana Ltd In Bhavaniagar, Baramati, Pune**
- **Krishi Vigyan Kendra (KVK), Baramati,**
- **Center of Excellence (CoE) In Dairy, Baramati,**
- **Indian Biodiesel Corporation, Baramati**

On 29th July 2022. A group of 22 members (17 students and 5 faculty members) participated in this event.

This visit was organized during the annual maintenance period of the sugar factory and thus the members participated got a great opportunity to get an exposure to the details of the sugar manufacturing technology and bagasse based power generation technologies which are not usually visible, by witnessing the dismantled machineries and equipment.

At Krishi Vigyan Kendra students were briefed about the problems faced by the farmers while performing agriculture. Steps on how can the farm output be increased, by the use of organic fertilizers, the appropriate crop planting patterns, educating the farmers about the soil health, the ways they can replenish the lost nutrients in the soil. KVK is also involved in generation of the hybrid or genetically modified seed which are diseases/ pest resistant and many more benefits for the farmers. KVK also focus on what modern machineries and technologies could be developed for better yielding and better harvesting of crop.

For Centre Of Excellence (CoE) In Dairy, Baramati, a walk through was conducted on the plant campus, the demonstration of cattle arriving at the milking station to the exit of the cattle from the station was shown. We were also guided on the flow process of the milk, from milking from the cattle to pasteurization, to the end packing of milk & milk products.

For Indian biodiesel corporation, Baramati, students were introduced to optimization of biodiesel production process from non-edible oilseeds/ feed stocks like Jatropha, Karanja castor. The impacts of using biodiesels in conventional CI engines, the scope of research in the field of biodiesel were discussed with students and students were guided on opportunities in this field.

Title: "Exposure Visit at DAS offshore, rohini yard Sponsored by Bureau of Indian Standards"

Organized by: Mechanical Department, PHCET in collaboration with Bureau of Indian Standards, Mumbai Branch Office-II and DAS offshore, rohini yard

Category/ Theme: Industrial Visit

Event Date: 22nd September 2022.

Mode of Conduct: Physical

Venue: DAS offshore, rohini yard, Mendadi, Raigad, Tal: Rohini, Post: Mhasala, Maharashtra- 402105

Name of the Faculty Coordinator: Mr. Vaibhav Bhagat, Mr. Hemant Patil, Mr. Atul Jade

No of Students Participated: 43 students of Mechanical, Civil and Electrical Branch

No of Faculty Participated: 11

Description:

DAS Offshore Limited was established as an engineering and construction company mainly for fabrication of offshore structures in 1992. With passage of time, the company has diversified into various areas and presently serves sectors such as

PRINCIPAL

Pillai HOC College of

Engineering and Technology.

Pillai's HOC Educational Campus

Rassyan, Tal. Khelapur

Dist. Raigad, Pin-410 207

upstream/downstream hydrocarbon, water supply, infrastructure etc. The core service area however continues to be upstream oil & gas.

The new Rohini Yard is located at village Rohini, Taluka Mhasala, Dist Raigad, Maharashtra. 125 km by Road, off NH17 (Mumbai-Goa Highway). It is on the south Bank 10kms inside the mouth of Rajpuri Creek, opposite the famous Janjira Fort.

Industrial Visit was organized at **DAS offshore, Rohini yard division**, Mhasala on **22nd September 2022**. The visit was organized for final year students of Mechanical, Electrical and Civil Engineering. **Dr. G. V. Patil (Head-Mechanical Engg. Department)** taken initiative for the same and this Visit is sponsored by Bureau of Indian Standards, Mumbai Branch Office-II under standard club formed by BIS in PHCET. **Mr. Vaibhav Bhagat (Faculty Coordinator of Standard club), Mr. Hemant patil, Mr. Atul Jade, Mr. Asokan S., Mr. R. D. More and Mr. Prashant Singh** shared the responsibility for successful conduction of the event. **Mr. Ashok Pawar (Power Plant incharge) of DAS offshore** guided the students first and then the complete group in divided into three sub groups as per Mechanical, Civil and Electrical domain for a visit. These sub groups were accompanied by domain heads of the industry. A total of **43** students from Mechanical, Electrical and Civil participated in this industrial visit.

The visit was organized to make students familiar with Different manufacturing processes and specialized fabrication processes for offshore projects. In this company students also saw the berthing of ships, loading / unloading of unmanned oil platforms and approach channel for safe navigation.

Students also saw the covered workshop with state-of-the-art equipment for cutting, piping, fabrication of steel plate, beam, pipe spools etc., pre-assembly work and assembly of different structures etc.

Title : Adani Dahanu Thermal power Station ADTPS Project

Industrial Visit

Visit Date: 27th January 2023

Mode of Conduct: Offline

Name and address of the Industry: Adani Foundation,
Adani Dahanu Thermal Power Station,
Dahanu Road, Maharashtra, Pin- 401608,
Adani Electricity Mumbai Limited

Organizers: Mr. Atul V. Jade

Speaker and guide from the industry:

Mr. Mr. Shubham Sonar (ADTPS, Project Udaan - Adani Social Development Foundation)

No of Students Participated: 53

No of Faculty Participated: 02

Description: Dahanu Thermal Power Station (DTPS) is a 500 megawatt (MW) coal power plant located in Maharashtra, India. The power plant is owned by Adani groups. It has an installed capacity of 500 MW (2x250 MW). The power plant was commissioned in 1995 and is commercially producing power since 1996. It was operated by Reliance Infrastructure Limited, which until 2008 was known as Reliance Energy and before that as Bombay Suburban Electric Supply (BSES)

Adani's thermal power portfolio comprises 12,410 MW. This includes a power plant each in Mundra (Gujarat), Tiroda (Maharashtra), Kawai (Rajasthan), Udipi (Karnataka) and, Korba and Raikhedra (Chhattisgarh).

Mr. Shubham introduced the students about the history and present position of the industry. Also, he conducted a nice session explained various cycles in power plant with automated models.

Throughout the visit, Mr. Shubham and his team interacted with students and helped them to enhance their knowledge. Students were very enthusiastic while watching & studying the plant and became happy especially when they saw the coal blending machine.

Title: Industrial Visit to HVDC Padage

MAHATMA EDUCATION SOCIETY
PILLAI HOC COLLEGE OF
ENGINEERING & TECHNOLOGY, RASAYANI

Electrical Engineering :Academic Year :2022-23
Industrial Visit to HVDC Terminal Station, MSETCL,Padghe,
Mumbai 421101.

Date 11th September, 2023
Venue HVDC Terminal Station, MSETCL,Padghe
Co-ordinate Prof. Sangeetha Rajagopal., Prof. Narendra Dhande
Department Electrical Engineering

The Electrical Engineering Department organized an industrial visit for the BE Electrical students to HVDC Terminal Station, MSETCL,Padghe.

The Maharashtra State Electricity Board (MSEB) built a 1,500 MW HVDC link between the cities of Chandrapur and Padghe (near Mumbai) - the first HVDC transmission link to Mumbai. The converter terminals were constructed by ABB (Sweden and India) and Bharat Heavy Electricals Limited (BHEL) of India. The 500 kV Chandrapur - Padghe HVDC Bipole feeds Mumbai on the west coast with 1,500 MW from a thermal power generation plant located near Chandrapur in the eastern part of Maharashtra State 752 km away. The link helps to stabilize the Maharashtra grid, increasing power flow on the existing 400 kV AC lines while minimizing total line losses.

±500 KV HVDC Padghe Plant Specification:

Commissioning year:	1999
Power rating:	1,500 MW
No. of poles:	2
AC voltage:	400 kV (Both Ends)
DC voltage:	±500 kV
Length of overhead DC line:	752 km

Engineering and Technology.**

**Pillai's HOC Educational Campus
Rasayani, Tal. Khelapur
Dist. Raigad, Pin-410 207**

Main reason for choosing HVDC Application:

Long distance, network stability, environmental concerns
Connecting remote generation

This visit was fruitful for students to bridge the gap between the theoretical and practical knowledge.

Outcome of the visit

- Students got the basic idea about Transmission Line Power Flow, Convert DC to AC, Thyristor Bank, DC and AC Switchyard Operation, Electrode Station, PLC and SCADA System Operation, etc.
- Students got information about how to transmit power from Chandrapur to Padghe HVDC Terminal Station.
- Students observed the whole working process of Conversion of DC to AC.
- Student got information of various section of Padghe HVDC Terminal Station.
 - AC Switchyard
 - DC Switchyard
 - Control Room
 - Safety Section

One of the Ex.Engineers elucidated the whole information about working of HVDC terminal Station, also explained HVDC Chandrapur to Padghe indication and control panel. After explanation students have visited to DC and AC Switchyard. Students were satisfied about the industrial visit at HVDC Terminal Station, MSETCL, Padghe, Mumbai 421101.

Industrial Visit to 220/100/22KV Substation APTE.

Date 11th -12th April 2022
Venue 220/100/22KV Substation Apte
Co-ordinators Prof. R. D. More, Prof. Sangeetha K., Prof. Pranita Chavan, Prof. Ronita Panna
Department Electrical Engineering

The Electrical Engineering Department organized an industrial visit for the Third Year Electrical Engineering student on 11th and 12th April 2022 to Maharashtra State Electricity Transmission Company 220/100/22 KV APTE Substation. Students are divided in two batches. Our main purpose for this visit is to be familiar with industrial environment and to get practical knowledge of electrical power transmission and distribution system.

From this visit, student got the detailed information and practical knowledge about single line diagram of substation and about different component of substation like feeder, circuit breaker, transformer, isolator, bus bar, Protective relays, Lightning arresters, Wave Trap, Load break switches and their construction, working principle.

They got the idea how to read the single line diagram of power substation using different symbols used in diagram. Student cleared out practical knowledge of transformer as how it step down voltage 220 KV to 100 KV. They also got knowledge about new SCADA based system as you can operate substation by manually or by command from computer using SCADA system and PLC programming. About 49 students were benefited from this visit as they got chance to discussion with assistant engineers working at Substation.

Report on Industrial Visit

OSAY 2022-23

Department of ASH organized industrial visit for first year engineering students on 28th Nov 2022. Students along with Dr. Avinash Gatade and Mr. Nilesh Raut visited Patalganga MIDC water treatment plant division wise to understand their water purification process.

Patalganga MIDC, Water treatment plant in charge Mr. Kawale explained entire water treatment process held at the plant. Students were given a brief idea on the technical aspects of water treatment and the working of various machineries.

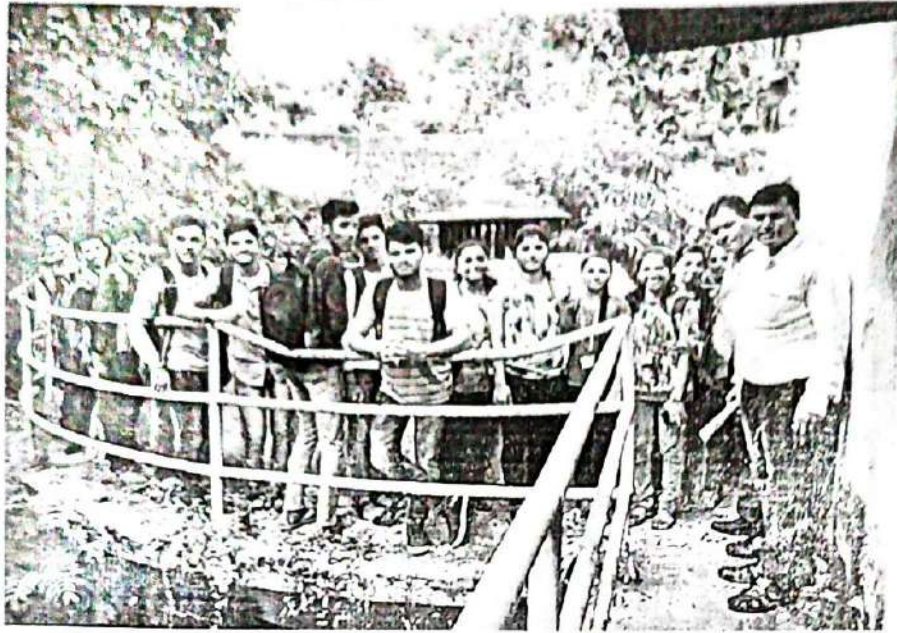

A handwritten signature in blue ink, appearing to read 'S. Gawale', written over a horizontal line.

Industrial Visit to Cyber forensic Lab

Date	February 28, 2023
Industry Name	Aiipitech Pvt Ltd.
Coordinator	Ms.Pradnya Patil
Department	Computer Engineering

Pillai HOC College of Engineering and Technology, Department of Computer Engineering students had successfully visited to "Aiipitech Pvt Ltd." on 28th February, 2023.

Importance of Cyber Security

Today we live in a digital era where all aspects of our lives depend on the network, computer and other electronic devices, and software applications. All critical infrastructure such as the banking system, healthcare, financial institutions, governments, and manufacturing industries use devices connected to the Internet as a core part of their operations. Some of their information can be sensitive for unauthorized access.

Cyber-attack is now an international concern that hacks the system, and other security attacks could endanger the global economy. Therefore, it is essential to have an excellent cyber security strategy to protect sensitive information from high-profile security breaches. Furthermore, as the volume of cyber-attacks grows, companies and organizations need to use strong cyber security measures and processes to protect their sensitive business and personal information.

Goals of Cyber Security

1. To ensure data protection. Protect the confidentiality of data.
2. Preserve the integrity of data.
3. Promote the availability of data for authorized users.

Dist. Raigad, Pin-410 207

Industrial Visit Details:

1. This visit helped the students to clear the concepts and techniques associated with physical infrastructure security devices, systems and techniques used to combat theft, prevent physical damage, maintain system integrity and services, and limit unauthorized disclosure of information.

Industrial Visit Outcome:

The main outcome was

1. Students will be able to understand the practical working of the cyber forensic tools.
2. Students will be able to understand tools and techniques used to secure the perimeters of all local computing devices.
3. Students will be able to gain good knowledge in the cyber forensic field.

Industrial Visit Feedback:

The industrial visit was attended by the third year students. We received a good response from the students and also they gave very good feedback. All the tools were explained clearly and doubts were also cleared.

Department of Civil Engineering

IV report with student list:

A Sewage Treatment Plant site visit for the T.E. (Semester VI)Civil Engineering students was organized by Department of Civil Engineering on 11 April 2023. The location of site was KHARGHAR ,SECTOR 19 , NAVI MUMBAI. The agenda of the visit consist of explanation and understand of Sewage treatment in STP plant (i.e. handling of Plant, planning, management, safety in STP).

Objectives:

1. To gain the practical knowledge about STP.
2. To understand the practical aspect of the Sewage treatment technique.
3. Exposure to the working environment on site and weather conditions STP plant.
4. To communicate with the professionals in STP and to understand the importance of STP in the every CIDCO.
5. To see the different equipment's and machineries and their usage STP plant.
6. Exposure to different types of Equipments, Components and technology in STP.
7. Awareness of the importance of the safety in STP .

Field work report:

A traffic survey was carried out at Utsav Chowk , Kharghar for third year students to capture data that accurately reflects the real world traffic situation in the area. The main purpose is to estimate the highway usage, to find out the vehicular flow and their average speed, classified volume count at mid-block section, and Speed profile study at mid-block section.

The traffic survey was conducted with the following objectives:

PRINCIPAL

Mahatma Education Society's
Pillai HOC College of

Pillai's HOC Educational Campus
Rassyan, Tal. Khelapur
Dist. Raigad, Pin-410 207

- To familiarize the students about different traffic surveys.
- To install the knowledge of taking traffic survey by different methods.
- To aware the students about different concepts such as PCU etc.

Site Selection

The site for surveying project was selected considering the following criteria:

- It should be a four way junction.
- It should have sufficient traffic.
- The traffic should consist of all types of vehicles including light motor vehicle and heavy motor vehicle.

A Report on

Industrial Visit to GMRT (Giant Metre-wave Radio Telescope)

On the occasion of National Science Day, Department of Electronics & Computer Science, Pillai HOC college of Engineering & Technology, Rasayani had organized an industrial visit on 28th February, 2023 to GMRT (Giant Metrewave Radio Telescope) located in Narayangaon, Junnar, Pune for the students of T.E. and B.E. Electronics & Computer Science.

The Giant Metrewave Radio Telescope (GMRT), is an array of thirty fully steerable parabolic radio telescopes of 45 metre diameter, observing at metre wavelengths. It is the largest and most sensitive radio telescope array in the world at low frequencies. It is operated by the National Centre for Radio Astrophysics (NCRA), a part of the Tata Institute of Fundamental Research, Mumbai. It was conceived and built under the direction of Late Prof. Govind Swarup during 1984 to 1996. It is an interferometric array with baselines of up to 25 kilometres (16 mi). It was recently upgraded with new receivers, after which it is also known as the upgraded Giant Metrewave Radio Telescope (uGMRT).

Each year on National Science Day, the observatory invites the public and pupils from schools and colleges in the surrounding area to visit the site where they can listen to explanations of radio astronomy, receiver technology and astronomy from the engineers and astronomers who work there.

Students of T.E. and B.E. EXTC visited GMRT on 28th February, 2023. Students had interactions with various members from TIFR, BARC, GMRT, school and college representatives etc. Various systems and projects displayed at GMRT were visited and students could learn practical aspects of Optical Fiber Communication, Satellite Communication and Microwave Communication.
